Guarantee

Our croquet equipment is made from the finest materials available sourced from around the world. The timbers used have been well seasoned and carefully machined by craftsmen who are proud of their workmanship.

They're guaranteed against breakage, in the course of reasonable use and care.

WOOD MALLETs

Since 1882

Over the past three decades Wood Mallets Ltd has earned a reputation worldwide for superb craftsmanship, well priced equipment and great service. Our croquet equipment is made to the highest possible standards using the best materials by craftsmen who are proud of their workmanship. Whether for the International croquet champion or back yard player, our equipment is made to look great and perform well.

*The UK Croquet Associations biggest selling croquet mallets
Are made here!*

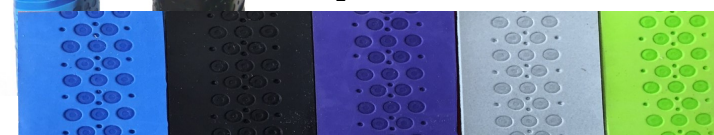

The Original Mallet (as pictured) has a turned American white ash handle with a 9 1/4" long rectangular head. They're available in weights from 2.06lbs through to 3lbs.04oz or more if required and overall lengths from 31" up to 38". The heads are made from sustainable South American Massa with an inlaid sycamore sighting line. 12mm thick Tufnol end plates are fitted and lead weights are inserted into the underside of the head.

Artificial cushion grips are fitted in a range of colours although traditional split leather grips are available as an optional extra.

A superb quality mallet for any level of player at a very competitive price.

We specialize in custom making mallets to customers specifications and we make a range of mallets to suit club players of all levels. Mallets can have handles made of ash, fibre glass or carbon. Heads can be custom made to any length or dimensions.

When an appropriate mallet handle has been fitted, lead weights are inserted into predrilled holes on the under side of the head and then plugged with hardwood dowels to achieve the desired overall weight. Our standard weight mallet is 3.00 lbs overall. Mallet weights from 2.lb 6oz to 3lb 4ozs may be custom made at no extra charge.

Our distinctive gold crest is stamped on one side of the mallet head and the overall mallet weight stamped on the handle. Each mallet then receives no less than four spray coats of epoxy urethane with sanding in between coats to create a high lustre, hard wearing finish.

The Discovery mallets have been added to our inventory by popular demand. They're a hybrid between the Original and Evolution mallets. They have the lightweight carbon/EVA handles but standard 9 1/4" lead weighted heads with 12mm tufnol end plates. A popular option is to have the top section of the handle shaped to an octagonal pattern 31mm x 27mm with an 8" lower roll grip hand turned to an attractive and comfortable shape. Full length octagonal EVA grips are also available and may be customized to different shapes and sizes.

To personalize your mallet, we can stamp up to 10 capital letters in gold foil or a label.

The Evolution and Discovery mallet heads use Indian Kikar chosen for its stability and beautiful grain. A 4 mm sycamore sighting line is inlaid into the top of the head and 12mm "Tufnol" end plates are fitted. Tufnol is a brown resin-impregnated cloth material which is virtually unbreakable and provides a crisp and true surface for striking the ball.

Our standard mallet head measures 235mm (9 1/4") long x 60mm (2 3/8") wide x 65mm (2 1/2") high. Mallet heads may be made to other specifications if you prefer.

EVA handles can be shaped to the traditional octagonal shape or the slightly larger 35mm round with flat sides as pictured.

The Evolution mallet has evolved from several years sourcing the best possible materials and trialing different concepts and configurations. Only recently have the rules of croquet allowed the use of metal end plates.

8mm thick milled stainless steel end plates provide peripheral weighting to an attractive Indian Kikar head measuring 55mm wide by 60mm high. The standard head length is 10" in length but custom lengths are made to order. These are superbly balanced mallets that provide the player with more power and yet maintain better control.

By increasing the length of the head, and redistributing some of the mass to the striking faces, the moment of inertia is increased. This makes the head more stable during the swing, particularly for making accurate rushes, long roquets, and hitting-in. Also the mallet is less likely to twist when shots are hit off-centre.

The virtually indestructible 17 mm diameter carbon and fibreglass shaft is foam filled to minimize vibrations. They're made to a reasonably stiff flex unless otherwise requested. The long length octagonal EVA closed cell grip is the ultimate grip material being waterproof, comfortable and light. The whole handle weighs an average of just 10 ounces.

Removable heads with aluminum fittings as shown are an optional extra.

Mallet covers Made from padded polyester these fit mallets with up to 38" long and heads up to 12".

Available in blue or red.

Balls. We stock a range of balls from home garden to championship approved.
