**Championship hoops**

Welded steel. Packed in a pine box. 3 11/16" gap.

**Centre Pegs - 4 and 8 colours.** Regulation sized painted hardwood with removable top pin.

**Corner Flags** All weather replaceable flags on powder coated metal poles.

**Guarantee**

*Our croquet equipment is made from the finest materials available sourced from around the world. The timbers used have been well seasoned and carefully machined by craftsmen who are proud of their workmanship. They're guaranteed against breakage, in the course of reasonable use and care.*

**WOOD MALLET**

Since 1982

Over the past three decades Wood Mallets Ltd has earned a reputation worldwide for superb craftsmanship, well priced equipment and great service. Our croquet equipment is made to the highest possible standards using the best materials by craftsmen who are proud of their workmanship. Whether for the international croquet champion or back yard player, our equipment is made to look great and perform well.

*The UK Croquet Associations biggest selling croquet mallets*

**The Original Mallet** (as pictured) has a turned American white ash handle with a 9 1/4" long rectangular head. They're available in weights from 2.lbs 6oz through to 3lbs. 4oz or more if required and overall lengths from 30" up to 38". The heads are made from sustainable South American Massa with an inlaid sycamore sighting line. 12mm thick Tufnol end plates are fitted and lead weights are inserted into the underside of the head.

Artificial cushion grips are fitted in a range of colours although traditional split leather grips are available as an optional extra.

A superb quality mallet for any level of player at a very competitive price.

**Grip colours**

We specialize in custom making mallets to customers specifications and we make a range of mallets to suit club players of all levels. Mallets can have handles made of ash, fibre glass or carbon. Heads can be custom made to any length or dimensions.

When an appropriate mallet handle has been fitted, lead weights are inserted into predrilled holes on the under side of the head and then plugged with hardwood dowels to achieve the desired overall weight. Our standard weight mallet is 3.00 lbs overall. Mallet weights from 2.1b 8oz to 3lb 4ozs may be custom made at no extra charge.

Our distinctive gold crest is stamped on one side of the mallet head and the overall mallet weight stamped on the handle. Each mallet then receives no less than three spray coats of epoxy urethane with sanding in between coats to create a high lustre, hard wearing finish.

**The Discovery mallets** have been added to our inventory by popular demand. They're a hybrid between the Original and Evolution mallets. They have the lightweight carbon/EVA handles but standard 9 1/4" lead weighted heads with 12mm tufnol end plates. A popular option is to have the top section of the handle shaped to an octagonal pattern 31mm x 27mm with an 8" lower roll grip hand turned to an attractive and comfortable shape. Full length octagonal EVA grips are also available and may be customized to different shapes and sizes.

**To personalize your mallet, we can stamp up to 10 capital letters in gold foil or a label.**

The Evolution and Discovery mallet heads use Indian Sheesham wood chosen for its stability and beautiful grain. A 6 mm sycamore sighting line is inlaid into the top of the head and 12mm "Tufnol" end plates are fitted. Tufnol is a brown resin-impregnated cloth material which is virtually unbreakable and provides a crisp and true surface for striking the ball.

Our standard mallet head measures 235mm (9 1/4") long x 60mm (2 3/8") wide x 65mm (2 1/2") high. Mallet heads may be made to other specifications if you prefer.

EVA handles can be shaped to the traditional octagonal shape or the slightly larger 35mm round with flat sides as pictured.

**The Evolution mallet** is by far our best seller having evolved from over 35 years and trialing different materials, concepts and configurations.

9 mm thick milled stainless steel end plates provide peripheral weighting to an attractive Indian Sheesham wood head. The concept of the laminated head is to reduce the weight of the wooden section so that thicker metal end plates can be used, thus maximizing the effect of peripheral weighting. It also increases the stability of the head by having the heavier wood on the sides. For longer or lighter heads we use a wider central core. The standard head length is 10" in length but custom lengths are made to order. These are superbly balanced mallets that provide the player with more power and yet maintain better control.

By redistributing some of the mass to the striking faces, the moment of inertia is increased. This makes the head more stable during the swing, particularly for making accurate rushes, long roquets, and hitting-in.

Also the mallet is less likely to twist when shots are hit off-centre. The main concept of the laminated head is to reduce the weight of the wooden section so that we can use thicker metal end plates, thus maximizing the effect of peripheral weighting. It also increases the stability of the head by having the heavier wood on the sides. For longer or lighter heads we use a wider central core.

The virtually indestructible 17 mm diameter carbon and fibreglass shaft is foam filled to minimize vibrations. They're made to a reasonably stiff flex unless otherwise requested. The long length octagonal EVA closed cell grip is the ultimate grip material being waterproof, comfortable and light. The whole handle weighs an average of just over 10 ounces. Available in tan or light navy and octagonal or round with flat sides.

Narrow Head  
Light navy grip

Wide head  
Tan grip

**Mallet covers** Made from padded polyester in two sizes available in blue or red

**Balls** We stock home Garden and Championship approved CQ-16 balls
